Equinox Geospatial

Award Winning GIS Consultants

Our Services

Our team provides expert installation, support, and proactive monitoring of ArcGIS Enterprise, including Image Server, GeoEvent Server, and other extensions. Firms need ArcGIS Enterprise Monitoring to maintain the health and performance of their software and services. Our monitoring services ensure that your system remains secure, up-to-date, and operates efficiently, giving you peace of mind while maximizing your ArcGIS investment

ArcGIS Enterprise Implementation and Support

Our team provides expert installation, support, and monitoring of ArcGIS Enterprise, including Image Server, GeoEvent Server, and other extensions. Our experienced team can help you get the most out of your ArcGIS investment and ensure your system is secure and up-to-date.

Survey 123 and Field Maps

Survey 123 and Field Maps are essential tools for GIS professionals. Survey 123 is a mobile data collection app that simplifies data collection in the field with its form-centric approach. Field Maps, on the other hand, provides a map-centric interface for inspecting, analyzing, and sharing GIS data. With Survey 123, users can create custom reports using automated workflows developed with MAKE and Power Automate. By leveraging the power of Survey 123 and Field Maps, GIS professionals can seamlessly create, collect, and analyze data in the field, optimizing workflows and enhancing overall efficiency.

Mapping and custom GIS application development

Our developers utilize ESRI's Web Application Builder, Experience Builder, and Operations Dashboard to craft robust web mapping applications. These applications feature custom workflows and embedded analytics to meet your unique needs. Additionally, our skilled developers are capable of creating fully customized web mapping applications from scratch using the ESRI JavaScript API.

GIS Analysis and Cartography

We offer a comprehensive suite of GIS Analysis and Cartography services, supported by robust ArcGIS Enterprise Monitoring to ensure optimal performance. Our expert team of GIS professionals not only creates custom maps and figures using the latest software, such as ArcGIS Pro, but also ensures that the underlying infrastructure is maintained and monitored for continuous service reliability. We also provide tailored training courses to help you master the software. Our GIS Analysis services include site selection, data visualization, route planning, and market analysis. Contact us today to learn more about how we can help you with your GIS needs.
